-!- FUNCTION: Type XII collagen interacts with type I collagen containing fibrils, the COL1 domain could be associated with the surface of the fibrils, and the COL2 and NC3 domains may be localized in the perifibrillar matrix (By similarity).

-!- SUBUNIT: Trimer of identical chains each containing 190 kDa of nontriple-helical sequences.

-!- ALTERNATIVE PRODUCTS:

Comment=The final tissue form of collagen XII may contain homotrimers of either isoform Long or isoform Short or any combination of isoform Long and isoform Short;
                                                                                                                                    Hydroxylation;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 unit (G-X-Y) are hydroxylated in some or all of the chansimilarity).

PTM: O-glycosylation of isoform Long; glycosaminoglycan chondroitin-sulfate type (By similarity).

SIMILARITY: Belongs to the fibril-associated collagens winterrupted helices (PACIT) family.

SIMILARITY: Contains 18 fibronectin type-III domains.

SIMILARITY: Contains 1 TSP N-terminal (TSPN) domain.

SIMILARITY: Contains 4 VWFA domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        IsoId=099715-2; Sequence=VSP 001149;
TISSUE SPECIFICITY: Found in collagen I-containing tissues: both isoform Short and isoform Long appear in amnion, chorion, skeletamuscle, small intestine, and in cell culture of dermal fibroblasts, keratinocytes and endothelial cells. Only the short isoform is found in lung, placenta, kidney and a squamous cell
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    PTM: The triple-helical tail is stabilized each end (By similarity).

PTM: Prolines at the third position of the unit (G-X-Y) are hydroxylated in some or al
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 carcinoma cell line.

                                                                                                                                                                                                                                                                                                                        "Structural variation of type XII collagen at its carboxyl-terminal NC1 domain generated by tissue-specific alternative splicing.";
J. Biol. Chem. 274:2203-22059(1999).
-!- FUNCTION: Type XII collagen interacts with type I collagen containing fibrils, the COL1 domain could be associated with the surface of the fibrils, and the COL2 and NC3 domains may be localized in the perifibrillar matrix (By similarity).
-!- SUBUNIT: Trimer of identical chains each containing 190 kDa of nontriple-helical sequences (By similarity).

IsoId=Q60847-4; Sequence=VSP_001150, VSP_001151, VSP_001152; TISSUE SPECIFICITY: Highest expression in tendons, perichondrium, skin, cornea, sclera, blood vessels, and periosteum.

DEVELOPMENTAL STAGE: The long NC3 XIIA isoforms are predominant a early stages (ED7 and 11); at later stages of development (ED15 and 17) the short NC3 XIIB forms become the major forms. As the short NC3 forms become the major product, the long splice variant continues to be expressed in several tissues, even after birth.
                                                                                                                                                                                                                                                                       Event=Alternative splicing; Named isoforms=4;
Comment=The final tissue form of collagen XII may contain
homotrimers or any combination of the various isoforms;

SIMILARITY: Belongs to the fibril-associated collagens with interrupted helices (FACIT) family.

SIMILARITY: Contains 18 fibronectin type-III domains.

SIMILARITY: Contains 1 TSP N-terminal (TSPN) domain.

SIMILARITY: Contains 4 VWFA domains.

"Structural analysis of the heparin-binding site of the NC1 domain collagen XIV by CD and NMR.";
Biochemistry 38:6479-6488(1999).
-!- FUNCTION: An adhesive role by integrating collagen bundles. It i probably associated with the surface of interstitial collagen fibrils via COL1. The COL2 domain may then serve as a rigid arm which sticks out from the fibril and protrudes the large N-terminal globular domain into the extracellular space, where it might increase with the extracellular space, where it

UE SPECIFICITY: Wide tissue distribution, high presence in UE SPECIFICITY: Wide tissue distribution, high presence in Connective tissue in skeletal muscle.

Lysines at the third position of the tripeptide repeating (G-X-Y) are hydroxylated in all cases and bind carbohydrates.

Prolines at the third position of the tripeptide repeating Prolines at the third position of the tripeptide repeating (G-X-Y) are hydroxylated in some or all of the chains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  interact with other matrix molecules
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         (MAR-1992) to the EMBL/GenBank/DDBJ databases
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Castagnola P., Dublet B., L

SIMILARITY: Belongs to the fibril-associated collagen interrupted helices (FACIT) family.

SIMILARITY: Contains 18 fibronectin type-III domains.

SIMILARITY: Contains 1 TSP N-terminal (TSPN) domain.

SIMILARITY: Contains 4 VWFA domains.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to Willebrand Factor A domain related-protein (WARP) which is a member of von Willebrand Factor A (VA)-domain protein superfamily of extracellular matrix (ECM) proteins. WARP is used as a molecular marker, used for detecting a loss of ECM integrity in an animal subject, monitoring repair, regeneration or other disease processes in an animal subject and detecting a disease condition or a propensity for the development of a disease condition in an animal subject. The invention is useful for the manufacture of a medicament in the treatment of a disease condition of the ECM. The disease condition involves the cartilage, and is preferably arthritis. The invention is also used in gene therapy. The present sequence is human WARP protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 418

                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC The invention relates to an isolated polynucleotide (I) comprising a CC nucleotide sequence selected from any of 948 sequences (ABZ1119-CC ABZ12066) or their mature protein coding portion, active domain coding protein or complementary sequences. The polynucleotides are useful for CC identifying expressed genes or for physical mapping of human genome. The CC encoded polypeptides (ABP68902-ABB69849) are useful as molecular weight CC markers, as a food supplement, for generating antibodies, in medical CC imaging, screening and diagnostic assays and for treating cell-CC proliferative disorders (cancer), neurodegenerative diseases (parkinson's CC or Alzheimer's disease), autoimmune diseases (multiple sclerosis, CC diabetes, lugus) genetic disorders, myeloid or lymphoid disorders, liver CC or lung fibrosis, infections (bacterial, viral, fungal, parasitic), CC arthritis, etc. Note: The sequence data for this pattent did not form part CC of the printed specification, but was obtained in electronic format CC directly from WIPO at.ftp.wipo.int/pub/published_pct_sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         New polynucleotides comprising sequences assembled from expressed sequence tags (ESTs), useful for treating cell-proliferative, neurodegenerative, autoimmune, genetic, myeloid or lymphoid, or p
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Tang

                                                                                                                         neuroprotective, nootropic, anorectic, antidiabetic, antimicrobial, and antilipaemic activity, and may have a use in gene therapy, and as a vaccine. The polypeptides are encoded by NOVX polynucleotides comprising any of the 303 fully defined nucleotide sequences given in the specification. The polypeptide is useful in the manufacture of a medicament for treating a syndrome associated with a human disease. The polypeptide, polynucleotide and antibody are useful in diagnosing, treating or preventing NOVX-associated disorders, e.g. cancer, cachexia, alzheimer's disease, Parkinson's disease, obesity, diabetes, infectious diseases, metabolic syndrome X or dyslipidaemias. The nucleic acids are
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               WPI; 200
